(54) Anti-corrosive metallic product

Claim (1) A metallic product having a cured film on a surface thereof formed by applying and baking an application liquid selected from a group consisting of:

(a) an application liquid comprising a reaction product of an amino-group containing alkoxysilane or a partial hydrolytic product thereof and an aliphatic unsaturated bond-containing epoxy compound, or a partial hydrolytic product of this reaction product as an application film component;

(b) an application liquid comprising a mixture of an aliphatic unsaturated bond-containing alkoxysilane or a partial hydrolytic product thereof with a silicic acid ester or a partial hydrolytic product thereof, or a hydrolytic product of a common part of said mixture as an application film component; and

(c) an application liquid comprising a reaction mixture formed by mixing an amino group-containing alkoxysilane or a partial hydrolytic product thereof and an aliphatic unsaturated bond-containing epoxy compound, which have or have not been previously reacted, or a partial hydrolytic product thereof, an aliphatic unsaturated bond-containing alkoxysilane or a partial hydrolytic product thereof and a silicic acid ester or a partial hydrolytic product thereof, or a hydrolytic product of a common part of said reaction mixture as an application film component.
